

# **Week 1 Tasks**

## 1. Write a Python Script:

- Include a multi-line comment at the top describing what the script does.
- Add a single-line comment before each significant line of code.
- Use print to output a greeting message.

## 2. Create a Python Script:

- Ask the user for their name using input().
- Print a personalized greeting message including the user's name.

## 3. Store and Print Variables:

- Store user input values of three different fruits in three variables.
- Print each fruit on a separate line.
